

NAME

CDIMEN – CUTEr tool to get the number of variables and constraints involved.

SYNOPSIS

CALL CDIMEN(INPUT, N, M)

DESCRIPTION

The CDIMEN subroutine discovers how many variables and constraints are involved in the problem decoded into OUTSDIF.d in the constrained programming case.

ARGUMENTS

The arguments of CDIMEN are as follows

INPUT [in] - integer

the unit number for the decoded data; the unit from which OUTSDIF.d is read,

N [out] - integer

the number of variables for the problem,

M [out] - integer

the total number of general constraints.
